## Ichthys Project Community Bulletin #3

Progress continues with the Ichthys Project being constructed by JKC Australia LNG Pty Ltd (JKC), with the continuation of early works at the Wickham Point Road Intersection.

Under the direction of JKC, Macmahon John Holland is upgrading Wickham Point Road intersection to improve future site access for the safety of all road users to the Ichthys Project onshore LNG facility at Blaydin Point.

The duration of the work is approximately 3 months and includes:

- Continued mobilisation of equipment to further establish the construction site along the road reserve;
- Development of the access road and site for plant and equipment;
- Clearing and some grading;
- Some heavy vehicle movements transporting site preparation materials;
- An increase in traffic accessing the site within the first two-month period - these activities will be carried out within the conditions of the approved Traffic Management Plan;

- A temporary truck haulage route being used until the Jenkins Road upgrade has been completed.

To minimise potential impacts to the community works will also include:

- Upgrade of Tulagi Road;
- Special safety signage installation indicating truck movements along Thorngate Road and Tulagi Road;
- Truck movements will be limited to daylight hours and avoid peak morning and afternoon periods;
- Temporary safety barricades, lighting and construction signage installation;
- No construction activity will be carried out on Sundays; and
- The site will be monitored for any potential issues during the construction period.

Community Bulletins will continue to update the Darwin community on the progress of this important Project. Additional communication tools will also be introduced as the Project develops, including a dedicated Ichthys Project community website.
