## Accommodation Village - Howard Springs

Progress continues with the Ichthys Project being constructed by JKC Australia LNG Pty Ltd, with site access for early works at the Howard Springs Accommodation Village (HSAV) commencing in the next week.

From Monday 23 April Laing O'Rourke will commence site preparation for the HSAV, located on Howard Springs Road, which has been designed to accommodate 3,500 workers at the peak of construction of the Ichthys LNG Facility at Blaydin Point.

This work is under the direction of JKC Australia LNG and is expected to take about two years to complete, with the first 1,000 worker beds available for accommodation in May 2013.

Early works will include:

- some light and heavy vehicle movements to and from the site;
- some heavy vehicle movements transporting site preparation materials;
- temporary construction signage installed;
- clear and grade activities, however, these will not be visible to the public as they are well inside the worksite area which will be surrounded by a minimum 50m vegetation buffer zone;

- a total of approximately 35 light and heavy vehicles will access the site within the first two-month period.

To minimise community disruption in the immediate surrounding area:

- no road closures will take place, however, some lane diversions may be necessary where large loads are transported to site;
- temporary barricade safety fencing will be in place;
- temporary lighting will be in place;
- truck movements will be limited to between the hours of 6:30am to 5:30pm (daylight hours);
- dust suppression applied when appropriate;
- no construction activity will be carried out on Sundays; and
- the location will be monitored for potential impacts during the construction period.

Community Bulletins will continue to update the Darwin community on the progress of this important Project. Additional communication tools will also be introduced as the Project develops, including a dedicated Ichthys Project community website.
